Election/Restrictions

1. Applicant's election without traverse of a constant velocity joint (Group II) in the reply filed on October 11, 2007 is acknowledged.

2. Claims 1-5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on October 11, 2007.

Drawings

3. The drawings are objected to because:

a. Reference numerals 7 & 8 are used to identify features in Fig. 6 and then reused to identify modifications of those features in subsequent drawings. Such usage is proscribed. See MPEP 608.02(e).

b. The inner face recited in claim 6, line 10 is not indicated in the drawings.

4. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the

Art Unit: 3679

drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

5. The attempt to incorporate subject matter into this application by reference to "JIS" at page 26 is ineffective because essential subject matter cannot be incorporated by reference to anything other than a United States patent publication.
6. The disclosure is objected to because page 26 includes the undefined acronym "JIS".
7. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3679

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 6-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kadota et al, US 6,488,588 (Kadota) in view of *SAE Universal Joint and Driveshaft Design Manual* (SAE Manual). In Figs. 16 & 34, Kadota shows a vehicular steering apparatus comprising every limitation of the claims except the first connecting base portion 2c of the male joint member 2 is not formed with a slit, a pair of flanges and a female serration. In Fig. 5 on page 210, *SAE Manual* shows a joint member with a connecting base portion with a slit, a pair of flanges and a female serration and teaches that such a base portion is commonly used in steering shaft systems. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the vehicular steering apparatus of Kadota by providing the male joint member 2 with a connecting portion having a slit, a pair of flanges and a female serration in order to provide the male joint member with a connecting portion that is commonly used in steering shaft systems as taught by *SAE Manual*.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Amberg, Krude and Ramey each show male and female joint members.
